Senior Full-Stack Software Engineer with 10+ years of experience building and scaling high-performance web, mobile, marketplace, fintech, API-driven, and AI-powered platforms for global companies including BMW, Bank-as-a-Service products, and technology startups.

Frontend-leaning fullstack profile with deep expertise in JavaScript and TypeScript, including React, Next.js, Angular, and Node.js, combined with solid experience designing scalable architectures, backend services, REST/GraphQL APIs, data models, reporting dashboards, production workflows, and LLM-powered automation.

Hands-on experience with RAG/LLM systems, SemanticIR, MCP tools, LangChain-based agents, context extraction, prompt engineering, AI-assisted workflows, and AI features that transform user intent and business context into structured actions, drafts, campaigns, creatives, and automated responses.

Proven track record owning complex systems end-to-end, from technical design and frontend architecture to API integration, testing, CI/CD, performance optimization, and production deployment. Strong focus on correctness, maintainability, developer experience, and measurable business impact.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, Python, SQL, C#, Dart, HTML5, CSS3/SASS

Frontend: React, Next.js (13/14), Redux, Zustand, Zod, Angular (RxJS, NgRx), Vue.js, Tailwind CSS

Backend: Node.js, REST APIs, GraphQL, API design, .NET Core, backend services and integrations

AI / LLM Engineering: RAG systems, LLM integrations, SemanticIR, LangChain, MCP tools, AI agents, prompt engineering, context extraction, AI automation, OpenAI/LLM APIs

Data & Storage: PostgreSQL, MySQL, MongoDB, data modeling, query optimization, reporting workflows

Cloud & Infrastructure: AWS (S3, Lambda, API Gateway), Docker, CI/CD (Jenkins, Azure DevOps), Firebase

Mobile: React Native, Flutter, Ionic, Android (Native)

Testing & Quality: Jest, Cypress, ESLint, Prettier; test automation, regression testing, quality-focused delivery

Architecture & Practices: Scalable system design, frontend architecture, component-driven architecture, performance optimization, API-driven products, responsive design, developer-facing workflows

AI-Assisted Development: GitHub Copilot, Cursor, Claude; code generation & refinement, multi-agent systems, LLM workflow design

PROFESSIONAL EXPERIENCE

Stamp | Senior Fullstack Engineer | Jan 2024 - Present

- Built and launched a greenfield marketplace platform from scratch, enabling TV streaming companies to monetize advertising inventory and onboarding multiple enterprise partners within the first quarter.
- Defined and led frontend architecture using React, Next.js 13/14, Angular, and TypeScript, improving scalability, maintainability, SEO, and performance with sub-2s First Contentful Paint.
- Designed and implemented backend services, REST/GraphQL APIs, and data models supporting marketplace operations, partner integrations, reporting, and scalable workflows.
- Built API-driven frontend flows for complex business entities including advertisers, campaigns, insertion orders, creatives, publishers, and partner-facing operations.
- Created SemanticIR, a semantic context and prompt-compilation layer used to improve codebase-aware LLM workflows, reusable context retrieval, and AI-assisted development productivity.

- Built AI-powered workflows using RAG concepts, LLMs, LangChain, and MCP tools, enabling users to generate and manage insertion orders, campaigns, creatives, and marketplace operations through agent-assisted interfaces.
- Developed MCP-based widgets and tool-driven agents that connected business entities, user intent, and structured workflows, reducing manual operational effort across campaign and advertising processes.
- Created data-driven features and internal dashboards to support reporting, partner analytics, operational visibility, and business decision-making.
- Developed a video upload and processing pipeline using S3-compatible storage, covering ingestion, optimization, and delivery for scalable media workflows.
- Established CI/CD pipelines and testing strategy with Jest and Cypress, reducing production regressions and deployment-related issues by 40%.
- Operated in a high-ownership environment, independently driving complex frontend and fullstack features from technical design to production deployment.
- Provided technical leadership across architecture decisions, code quality standards, release stability, and AI-assisted development workflows.

Group BMW | Senior Fullstack Engineer | Jun 2023 - Dec 2023

- Engineered critical financial deal-management modules for BMW markets in the USA, Canada, and Mexico using Angular, .NET, SQL, and API-driven application architecture.
- Refactored a legacy deal-processing flow, resolving long-standing stability issues and reducing processing time by 80%.
- Designed and delivered compliance-critical features, including a region-specific Anti-Money Laundering (AML) solution for BMW Mexico.
- Built secure backend services and APIs supporting financial operations in a high-reliability, data-intensive environment.
- Worked with complex relational data models, optimizing SQL queries for performance, correctness, and scalability.
- Supported reporting and data validation workflows to ensure accuracy and consistency across financial operations.
- Automated regression testing with Jest/Cypress, reducing manual QA effort by 15-20 hours per sprint and increasing release confidence.

Vengreso | Senior Fullstack Developer (Contract) | Apr 2023 - Jun 2025

- Developed a Chrome Extension with advanced DOM manipulation, used by 10,000+ users to streamline workflows and improve daily productivity.
- Built AI-powered Chrome Extension features that extracted context from LinkedIn, Facebook, emails, posts, replies, and comments to generate relevant responses, comments, posts, and email drafts.
- Implemented context-aware LLM workflows that analyzed user-selected content and automatically generated tailored replies based on tone, intent, and response type.
- Developed AI-assisted writing flows such as "reply to comment with AI," enabling users to select the response style and auto-fill generated content directly into social media and email interfaces.
- Delivered production AI automation features before similar native capabilities became available in major platforms, combining DOM automation, contextual extraction, and LLM-generated writing assistance.
- Built backend services and APIs powering a centralized analytics and management dashboard for user data, workflows, and subscription plans.
- Designed scalable data processing flows and storage strategies to support feature growth and increasing user demand.
- Worked with user data and analytics pipelines to support reporting, insights, and product decision-making.
- Leveraged AI-assisted development tools to accelerate feature delivery while maintaining code quality and release stability.
- Optimized Git workflows and branching strategies, reducing merge conflicts and improving release stability across the team.
- Contributed to technical planning in a fast-paced startup environment, balancing speed, scalability, and long-term maintainability.

Layer | Senior Frontend Software Engineer | Dec 2020 - Aug 2023

- Collaborated with a distributed global team across 4+ time zones to build a Bank-as-a-Service platform adopted by international banks.
- Developed a proprietary Web SDK and component library using Angular Dart and Flutter, reducing client integration time by 35%.
- Designed reusable components and frontend architecture patterns to support scalability and consistency across multiple client integrations.
- Optimized frontend performance and component reusability, ensuring reliability and scalability during high-volume banking transactions.

- Contributed to the development of a white-label banking platform used by multiple financial institutions, enabling scalable and customizable deployments.

TRIO | Senior Web Engineer | Sep 2018 - Dec 2020

- Led frontend development of a social learning platform featuring interactive video players, gamified experiences, and educational content.
- Partnered closely with UX/UI designers to build a responsive, reusable design system, increasing user engagement by 30%.
- Defined and evolved frontend architecture and component standards to support scalability and maintainability.
- Modernized the technology stack using Angular, Ionic, and Node.js with Express, enabling efficient cross-platform delivery across web and mobile.
- Improved performance and user experience through component standardization and responsive design best practices.

System Developer | Easycomtec (Remote) | Jun 2018 - Sep 2018

- Delivered cross-platform mobile applications using Ionic, React Native, Node.js, and C# with .NET.

System Developer | Datacoper (Cascavel, BR) | Mar 2016 - Jan 2017

- Maintained and expanded CRM systems across Android, iOS, and Web platforms using Node.js, C#, .NET, MySQL, PostgreSQL, and SQL Server.

System Developer | Inside Sistemas (Toledo, BR) | Dec 2012 - Jan 2015

- Migrated legacy Visual Basic software to a cloud-based architecture using C# and Adobe Flex, modernizing the client's core software infrastructure.

EDUCATION

- Postgraduate Degree in Mobile Development - Faculdade Cidade Verde (FCV) | 2017 - 2018
- B.S. in Systems Analysis and Development - Universidade Paranaense (UNIPAR) | 2011 - 2015

Languages: Portuguese (Native) | English (C1)
